

Profile

My name is Jason Cameron, I am a Front End Developer with the life long goal of becoming a Full Stack Developer. I aim to provide clean, maintainable and modular code. I have also taken it upon myself to understand the core fundamentals of design when it comes to UI/UX as it plays an important role when developing applications/ sites for the end user. Furthermore, in this dynamic & ever changing industry, I have adopted an 'eager to learn' attitude, and also having an open ear to new and upcoming technologies and frameworks alike, new web standards and more. Moreover this industry and the community that is involved is always working and helping each other out, Consequently, if I am ever stuck on an issue, I guarantee a solution will be found.

Experience

Freelance / Contract developer, September 2017 - Present

Developing web sites & web applications using javascript framework like Vue.js, for contracted clients and small businesses.

Freelance development stack includes but not limited to:

- Vue.js for the front-end, along with bootstrap or bulma css framework.
- mongoDB & node.js with express.js for backend.
- Unit testing.
- most site hosted with netlify, or what ever client feels comfortable with.
